2017

50th
ANNIVERSARY

Feel the precision – with every stitch

The three-part modular needle-holder generation for laparoscopic surgery – **ERAGONstitch** – redefines the concept of ergonomics in the area of laparoscopic suturing instruments.

The latest member of the well-known and proven **ERAGONmodular** product family covers all individual user wishes with ergonomic handles in two different versions, two sheath diameters, three working lengths and a total of five different jaw designs.

Feel the difference

■ Ergonomic design

The two **ERAGONstitch** handle versions offer relaxed hand positioning at any time and therefore the greatest possible operating comfort. Handle shafts to match the anatomy of the hand provide comfortable handling.

Precision

■ Newly developed jaw mechanism

for even greater precision.

■ Reliable control of the needle

through consistent transfer of force.

■ Precise self-righting

New jaw geometry with self-righting function for curved needles.

**DESIGN
AWARD
2017**

The design that earned the IF Award for industrial design in 2017 highlights the efforts to redefine the concept of ergonomics in the area of laparoscopic suturing instruments with **ERAGONstitch**.

ERAGONmodular – The Laparoscopic Toolbox

As a new member of the **ERAGON** product family, **ERAGONstitch** is integrated seamlessly into the existing toolbox concept.

Modularity

■ To suit your requirements

The three-part structure allows you to put together your individual needle holder of choice.

■ Versatility

3.5 mm and 5 mm instruments in different working lengths are able to match all anatomical demands.

Intuitive handling

■ Simplicity

Completely new on-off ratchet mechanism operated entirely intuitively for very easy latch and release without additional control elements.

■ Proven

The typical **ERAGON** "click-it" mechanism permits simple assembly and disassembly of the individual components.

New jaw geometry with self-righting function for curved needles

New jaw with extra slimline geometry
